lambda_min	0.00016552002374905426
signal_detected	False

Interpretation

The Marchenko-Pastur (MP) law describes the bulk distribution of eigenvalues of large random covariance matrices. When the largest empirical eigenvalue exceeds the MP upper bound, this signals structured (non-random) information — i.e. the model has 'detected' a fact. Below the N_{crit} threshold the model can still self-correct; above it, the Caputo fractional dynamics dominate and the model enters the 'utility trap' described in the project's main monograph.
