

RMT-LLM Laboratory — Experiment Report

Generated: 2026-08-13T10:26:29.759549

Part I — Detailed Results with Explanations

Experiment: TEST_3D_FULL

Scenario:

Language: python / Version: en

Key Metrics

RMT Spectral Analysis

Quantity	Value
mp_upper	2.7

Interpretation

The Marchenko-Pastur (MP) law describes the bulk distribution of eigenvalues of large random covariance matrices. When the largest empirical eigenvalue exceeds the MP upper bound, this signals structured (non-random) information — i.e. the model has 'detected' a fact. Below the N_{crit} threshold the model can still self-correct; above it, the Caputo fractional dynamics dominate and the model enters the 'utility trap' described in the project's main monograph.

Part II — Full Task Launch Logs
